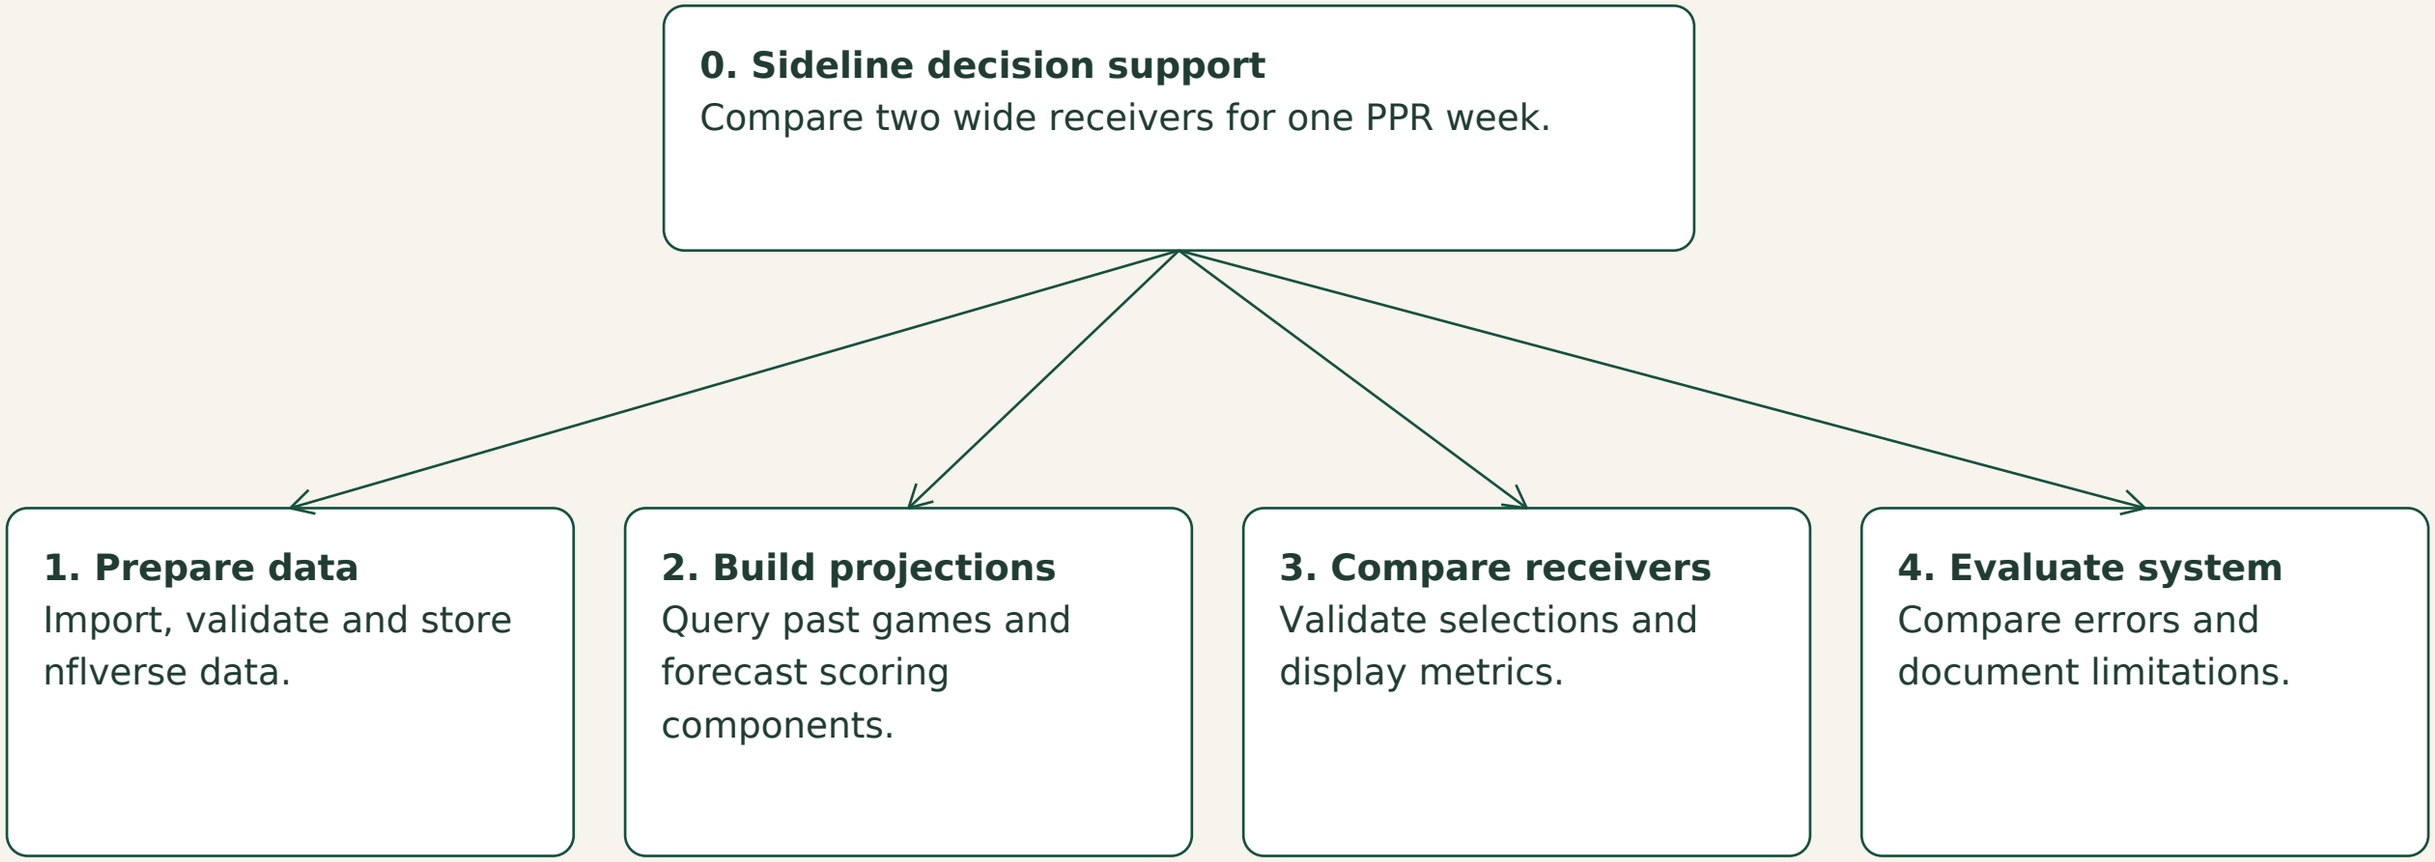
Functional decomposition: Level 0

Sideline | Implementation snapshot: October 11, 2026



Inputs: player selections, season/week and historical football data.
Outputs: projected PPR, comparison statistics, validation findings and clear limitations.

Functional decomposition: Level 1

Sideline | Implementation snapshot: October 11, 2026

1. Prepare data

1.1 Import weekly stats and schedules
1.2 Match player IDs and restrict to WR
1.3 Verify sample scores and source hashes
1.4 Add snaps, drops, red-zone and defense context

2. Build projections

2.1 Apply preweek cutoff
2.2 Compute 24 rolling features
2.3 Impute missing inputs using training medians
2.4 Predict components and calculate PPR

3. Compare receivers

3.1 Validate two distinct receivers
3.2 Resolve game and team context
3.3 Return projections and comparison table
3.4 Explain unavailable inputs and errors

4. Evaluate system

4.1 Train on 2023-2024
4.2 Evaluate 2025 and replay 2026
4.3 Compare against an eight-game average
4.4 Run leakage and API checks
